Subject: Funding for housing.

More and more people in Miami are forced to live on streets of our city each year. The problem that they face is qualifying for disability. It is taking longer and longer for these individual to qualify, and even though they admit to being homeless in their application, they are still denied disability, they are also being treated for mental health illnesses, is it possible that they will be given housing, how will they qualify? They have absolutely no income, what will become of them, how will they be affected by these monies?
